

Example vaccine opposition messaging

Source: Email sent to all Kansas representatives and senators yesterday

“Do you know how many vaccine doses an infant receives at each visit?

...

Today we are hearing reports of adults expressing their vaccine injuries from the COVID-19 vaccine. **How are babies, who are receiving so many shots at once, able to communicate their injuries?**

Is this why babies are known to cry for hours on end, start banging their heads on the walls and on their cribs, get very lethargic and are hard to wake up, die in their cribs, etc. after receiving a round of vaccines?

Vaccines cause injury and death. The Vaccine Injury Compensation Program has paid out \$4.5 billion since its inception. If you want more information, contact KSHF.”
